WE

PAVONI ITALIA has been providing purchasers with customized, quality products for more than 40 years. We supply the full range of dedicated containers in polypropylene and polyethylene for the world of logistics, retail trade (including mass retail trade), light industry, and chemical, pharmaceutical, food and automotive sectors.

GROUP 40 YEARS AS YOUR CO-WORKERS.

For more than 40 years, companies have been using our containers for their operations. Four decades of innovation and experience in the containers marketplace. We started out in the bakery sector and moved on to industry. A dedicated division engages in design and production of polyethylene and polypropylene crates, while providing personalized and custom-made solutions not only for the products as such, but also for the manufacturing process in its entirety. Our work takes us from drawings to delivery. All details and particulars are looked into in order to meet your specific needs.

6,000 articles, 20,500 m² premises and 15,000 customers worldwide. We owe the rise in figures to the work put into internationalizing our outreach, and into innovation and our policy of enhancing human resources – while always paying attention to the needs of our customer base. Customers can rest assured that their orders shall be fully customized, and that the products that they have ordered shall be well made, of excellence and with an optimal quality-price ratio.

VALUES CLARITY. CONSISTENCY. DEEP COMMITMENT. THE COURAGE OF THOSE WHO DO THEIR UTMOST TO DELIVER EXCELLENCE.

The courage and the deep commitment of those who go beyond the mere figures and accounting side of matters. Clarity and consistency to do what we love doing and do it well! These are the “four Cs” that guide us in our work, alongside the attention we pay to your requests, conformity with time schedules and customization of the service throughout the production and delivery chain. We go beyond the mere branding of our goods. Our goods are tailor-made, aligned to

specific production and delivery needs. Add to this, the very real attention we pay to people and to their talents that must be nurtured and fostered within our corporate structure, and to professional integrity, also exportable abroad. And – of course – the attention paid to our products! We have always been guided in our efforts by a spirit of innovation at the design stage, backed up by a responsive and responsible customer care service.

“

Not just a branded solution
but a 100% tailor-made
product

”

MIS SION

From Research and Development to production and distribution. Our aim is to provide fine, well made products designed to meet the specific needs of our customers – reflecting the unbounded commitment of all our partners.

HISTORY HISTORY ASSUMES VALUE IF IT PROJECTS INTO THE FUTURE.

One part of our history is called intuition. Our company, founded in 1980, is the brainchild of Maurizio Pavoni. Maurizio looked at the plastic crates marketplace and decided on a proactive approach to production of pieces tailored to the needs of bakers. The first industrial patents date back to 1994: baskets in plastic and crates for the food sector, devised with an efficient stacking system.

By the arrival of the new millennium, the experience gained within the bakery sector – and the know how that had been acquired in the meantime – could be invested in all other industrial sectors. On the strength of the knowledge gained, we could now devise specific products and tailor-made solutions for transporting, storing and handling products with our customers' needs in mind. Our activities as innovators led in 2012 to the opening of a new branch in the U.S.A., in New York, with a logistics hub in New Jersey. This move provided us with a new exciting stimulus and a springboard to confidently – and indeed enthusiastically – project us into the future!

NETWORK PAVONI'S GLOBAL POSITION. MADE IN ITALY GOES GLOBAL.

We distribute our products worldwide to Europe, the Middle East, Russia, the United States, Australia and the Far East. About 75% of our business turnover is generated by dealings conducted abroad... and counting! The distribution network grows year by year, and the PAVONI ITALIA brand is becoming a familiar name in many parts of the world, alongside the hallmark characteristics of Italian style.

You will find us at the major trade fairs and events held worldwide. With our new branch in New York and the logistical centre in New Jersey – and an export network attuned to your needs and requests, plus a responsive back-office providing answers within 24 h –, in performance terms, we have attained the status of a leading sector player. Thanks to our rapidity and reliability as well as our style and design, many major brands have decided to partner up with us, to represent these sensorial and rational features.

TECHNOLOGY PRODUCTION: ADD QUALITY TO PRECISION AND THEN MULTIPLY BY 1.8 MILLION.

Our injection moulding lines assure us the highest quality, with precision and production performance ratings that enable us to manufacture more than 1.8 million pieces per year, with more than 2,000 tons of raw material processed. This material is certified and delivered by the world's largest groups engaged in the production of thermoplastics.

Our production department – which works round the clock – blends ISO-certified Total Quality management practices with Lean Production measures in order to reduce waste, improve delivery times and enhance our efficiency and efficacy. Qualitative processing of products, validation of the same, reduction of tooling times and of the time taken up by changing the mould/version – these are just a few of the main operational measures adopted to make our production process flexible, rapid and competitive.

2,000 t
of raw material processed

1.8 mln
pieces produced per year

The final product is compliant with Reg. CE 2023/2006 GMP:

- biological risk restraint;
- chemical risk restraint;
- physical risk restraint.

The finished product is compliant with Reg. CE 1935/2004 - Reg. CE 10/2011, Current legislation regarding food contact.

CERTIFICATES WE PRODUCE BETTER TO ENABLE YOU TO IMPROVE PRODUCTION.

We were one of the first companies in our sector to obtain UNI EN ISO 9001 certification. Since 2009, our Quality Management System has been operational in accordance with the UNI EN ISO 9001:2008 standard. The system is certified by TUV Rheinland, a leading German concern with international ACCREDIA accreditation. Our status was re-confirmed in 2018 in accordance with the new UNI EN ISO 9001:2015 version. These certificates aren't just 'diplomas' to hang on the wall as decoration. They attest to our growth and our ability to turn corporate assets to best account. We do so by placing our customers and their satisfaction at the centre of our concerns, as a guarantee that you will find in us a reliable partner. In keeping with our ongoing growth as a corporate player in key world marketplaces, we obtained FDA (Food and Drug Administration) Registration for the US market. Yet again, we are confidently projected into the future.

YOU

WE ENABLE YOUR CAPABILITIES.

INDUSTRIAL DIVISION

PRODUCTION FROM THE ORIGINAL IDEA TO THE FINISHED PRODUCT, OUR SERVICE IS TAILORED TO YOUR NEEDS!

The services that we provide are all 100% tailor-made, right from the design stage through to delivery. Our standard mass produced pieces, too, must be agreed upon with you. For 40 years, we have been manufacturing a full range of plastic – polyethylene and polypropylene – crates for the industrial sector. Then comes our added value – i.e. the idea we have of a service that will pinpoint technical solutions that tally with your specifications while optimising the entire cycle, right up to delivery according to a jointly agreed timetable.

From idea to product as rapidly as possible, with maximum production efficiency and the advantages of dealings on a 'one-stop-shop' basis. The engineering division finalises its feasibility study for product development: machinery, diverse technical exigencies, and design and production cost. Following careful analysis of the costs involved, plans are drawn up concerning the resources to be deployed for production, accompanied by optimal outcomes, costs and timetables. The project proceeds from production of the mould to production line tooling, on to manufacture of the finished product and preparations for delivery to the warehouse, palletizing and delivery as jointly agreed upon.

SPECIAL PROJECTS

WE DO IT YOUR WAY.

SCOOTER BOX

Customer

HO.RE.CA

Solution

Plastic scooter box max dimensions 585x544x468 h mm.

Results

- the scooter box is the roomy and resistant container for always perfect pizzas on home delivery, as if just out of the oven;
- the UV-resistant polyethylene construction preserves it over time and makes it particularly resistant to impact;
- the snap closure system, with upward movement, prevents accidental opening even in the event of a fall;
- it is suitable for transport and contact with food and easily hook onto the luggage racks of scooters and bicycles.

FOLDABLE EUROPA CRATE

Customer

One of the foremost and most interesting of Germany's retail trade operators.

Request

Moving 190,000 items from logistical centres to more than 800 retail outlets in Europe, and in particular in Germany.

Solution

Foldable plastic crate (Europa 600x400 Foldable series).

Results

- optimization of the floor-level storage space with more than 250,000 sq. m of the warehouse;
- considerable reduction of space occupied during the empty crates transport stages;
- the compactness of the folded crates may enable space savings of as much as 70%, while minimizing transport and storage costs.

NESTING CRATE

Customer

A cooperative of pharmacists and one of the major wholesale distributors of pharmaceuticals in Germany.

Request

Handling of pharmaceuticals by means of automated systems for preparing orders to be delivered from logistical centres to the more than 8,000 associated pharmacies in the territory.

Solution

I series nesting plastic crates fitted with lid and safety seal.

Results

- this crate is suitable for use in automated warehouses because it includes an RFID microchip holder;
- sturdy, with load and safety seal for transporting products with the greatest care;
- smooth inner sides, readily and rapidly cleanable;
- because of their slightly conical shape, when empty, these crates can be nested, thus reducing storage and warehouse space by up to 75%.

CRATE FOR HAMBURGERS

Customer

Fast food chain

Request

Handling goods from supplier bakers to the chain's retail outlets in baskets customized for the various formats of buns.

Solution

RF series plastic crates for hamburgers, specifically designed and customized for transporting hamburger buns.

Results

- ideal for holding standard pans and when transported on standard trolleys;
- bottom reinforced for greater sturdiness and non-deformability;
- perforated-bottom typology enabling optimal exposure to the air for storage of the buns.

TAILOR-MADE SOLUTIONS PRODUCTS TAILORED TO YOUR OBJECTIVES.

Because they are tailored to the various needs of the mechanical, chemicals, food, textiles, logistical, automotive and transport sectors, to name but a few, our crates provide smart solutions for all logistical applications. The customization measures that we provide include branding, with mould and hot printing, and a full range of colours, dimensions and shapes available for the crates. These solutions may be applied throughout the chain. Palletization, transport and delivery may be structured made-to-measure, with excellent lead times.

COLOURS

The crates are presented with one standard colour. However, other colour solutions may be chosen at will.

HOT PRINTING

An automatic piston machine heat stamps your logo or trade mark on one or more sides of the crate. A coloured film is inserted between the crate and the brand cliché. The film is perfectly fixed onto the basket to represent with absolute precision the stamped element.

MOULD PRINTING

This process is indicated for large quantities. This type of customization process takes place during the moulding of the crate itself. The brand, or any wording or lettering decided upon, is relieved or engraved using the same colour as that of the crate being processed.

OUR PRODUCTION 100% TAILOR-MADE

The idea

Our engineering team listens to your specific requests and conducts a feasibility study.

The 3D model

The technical drawings and a 3D model are presented for the purposes of a genuinely tailor-made proposition.

Mould

A mould is produced, including (according to your requirements) the logo that you want to see impressed directly on the crate.

Raw material

To attain the performance ratings agreed upon, the raw materials that we use are provided by the best international producers.

Injection moulding

The material is melted. When it reaches the required viscosity, it is injected into the mould and then cooled.

Delivery

The manners of palletization of the finished product and of delivery are agreed upon with you.

RANGES MULTIPLE CONTENTS FOR EACH PROPOSITION

PLASTIC CRATES

Crates in polyethylene and polypropylene for industry, logistics, the automotive sector and the foods sector, to name but a few.

VEGISLAND

Modular exhibition spaces for the presentation of fruit and vegetables.

PALLETS

The load pallets used are stackable, nesting, sturdy and lightweight. They are readily cleanable for perfect hygiene.

TANKS AND BOXES

High-resistance containers for dough. The edges are rounded; the corners are reinforced; and the sides are smooth and readily cleanable. Available with wheels and special trolleys for tipping over.

ECOLOGICAL CONTAINERS

Sturdy and ecological (indispensable in all sectors, for correct waste organisation).

TERMOBOX CONTAINERS

Thermal containers with optimal performance ratings for insulated transport of hot and cold foods. Heat drop < 1° C/h.

MATERIALS

High density polyethylene (HDPE)

HDPE is one of the most resistant thermoplastic materials, even against acids and bases, as well as against low and high temperatures (range: from -30°C to +70°C).

Low density polyethylene (LLDPE)

This resistant material is more ductile and less rigid than high density polyethylene. It is endowed with adequate impact resistance and springback following deformation. Ideal for use at low temperatures.

Polypropylene (PP)

PP is a thermoplastic copolymer that is extremely resistant even against acids and bases. It is elastic and endowed with optimal characteristics in terms of impact resistance, shrinkage and hardening of the surface. It is suitable for applications in which resistance to high temperatures is required (from -20°C to +90°C).

EPP

Foam polypropylene is endowed with optimal heat insulation properties.

ABS

ABS is a material endowed with excellent construction properties (impact resistance) and mechanical properties (ease of working).

Other materials

Other plastics, such as polymethyl methacrylate, polycarbonate and polyamide.

AISI 304 stainless steel

All materials are compliant with current legal requirements governing the characteristics of packaging and containers coming into contact with foods.

The number of pieces per pallet indicated in the tables is as provided for by the EUR 1000x1200 standard.

BOTTOMS

EUROPA 600X400 mm AND 400X300 mm SERIES

SMOOTH BOTTOMS

The flat bottoms are ideal for ensuring low noise during handling by automated production and handling systems.

400x300 mm

PERFORATED BOTTOMS

The bottoms, featuring a variety of perforated screening solutions, enable the passage of air and liquids. Bottoms D – F – H were designed to facilitate stacking for the Europa 400x300 mm series crates. The F – G bottoms are ideal for containing small products.

400x300 mm

REINFORCED BOTTOMS

Closed bottoms that are highly resistant to deformation. Bottom B is suitable for stacking 400x300 mm crates.

400x300 mm

EUROPA LOGISTIC AND EUROPA FOLDABLE SERIES

Three typologies of closed bottoms: smooth (FB), reinforced (RB) and sandwich (SB). Ideal for silent handling on automated transport and handling systems (within the minimum threshold limits as set forth in the European regulations).

Max Load 20 Kg

Max Load 30 Kg

Max Load 50 Kg

PLASTIC CRATES

Versatility and flexibility, whether within the food sector or for all industrial types of sectors (mechanical, textiles, logistics etc. etc.). The plastic crates in polyethylene and polypropylene provide a broad range of solutions with a variety of sides, textures, bottoms, lids and hand grips, to provide space for contents of all kinds. The crates can be stacked and closed. They resist liquids and corrosion, cold and heat. They can be designed for special applications, and are suitable for work with automated production and handling systems. The crates are readily palletized, ensuring logistically impeccable management. A broad range of colours is also available for maximum customization.

EUROPA SERIES

The Europa series of crates presents many specialised solutions combining a variety of dimensions, sides, bottoms and specific accessories. Breathable transparent screen sides can be provided, enabling the passage of air and liquids. The bottom may be closed or perforated, while preventing, always, bending at the loading level. The bottom may be selected on the basis of weight, strength and ambits of use. Lids are available with or without hooks, to protect the goods against harm during transport and avoid soiling. The handles included for handling purposes can be customized (hole handles, closed handles and various combinations of these, for optimal user-friendliness).

HOW TO READ PAVONI PRODUCT CODE

Our product codes are “speaking” and are the result of a combination of different specifications (bottom, handles, sides and details).

HANDLES LEGEND

MC closed handles

ME external handles

MP hole handles

EUROPA LOGISTIC SERIES

Devised expressly for high tech automated and robotized handling operations, the Europa Logistic series is suitable for use with all the most widely adopted production and handling systems. These products are perfectly stackable, thus providing maximum compactness while facilitating management tasks. The fastening points facilitate automated handling. The various bottoms (smooth, reinforced and sandwich) provide a marked degree of adaptability to specific loads, optimizing smooth handling operations on automated systems while minimizing noise levels, thus ensuring compliance with European regulations.

Holes, docking points and solutions for automated handling.

Fire water evacuation holes.

Ergonomic hand grips for manual handling.

Fields for hot printing, labelling, barcode, and RFID and IML devices.

EUROPA FOLDABLE SERIES

A truly impressive loading capacity for a mere height of 70 mm. The Europa Foldable series of polypropylene crates was devised specifically to meet the needs of operators for whom the functions of reloading, repackaging and storing during periods of inactivity are vital. The 70% space saving also minimizes transport costs because of optimal stackability and ordering on pallets. The crates include inserts for heat stamping, labelling, bar codes, RFID and IML.

The Foldable series can be folded away very simply:

EUROPA 600x400 SERIES

The Europa 600x400 series is a truly versatile resource, appropriate for the load in question. Given the various combinations of sides, bottoms and handles, the crates are also perfectly stackable and palletizable on EUR 800x1200 mm or 1000x1200 mm pallets and are resistant against a broad range of climatic and temperature conditions. With its high load capacity and marked durability, the guarantee afforded by the use of premium class materials, its impact resistance, and resistance also when intensively used, this series provides ideal solutions for all applications.

SPECIAL VERSIONS

DOUBLE

Double is a polyfusion product, created by joining two crates in order to double the load volume. Double can be produced starting out from various base dimensions. The space thus created (an indispensable solution for specific handling needs) is unprecedented.

EUROPA 400x300 SERIES

Exceedingly sturdy, compact, indispensable, user-friendly – ideal for handling small objects or for storage in restricted spaces, the Europa 400x300 mm series is a versatile solution for logistical needs within many sectors of application. Each crate was devised to ensure maximum stability through efficient, balanced design. The product is available with solid or perforated sides, lids with or without hooks, and various bottom and handle typologies.

BL SERIES

The BL series is made up of sturdy storage polyethylene crates. The series' angled open-mouth form facilitates access to the objects inside. These readily stackable pieces are durable and resistant against many types of oils, greases, acids and solvent substances, and against extreme temperatures (from -40°C t $+80^{\circ}\text{C}$). The vertical reinforcing elements on the sides and back prevent the deformation of the item also when subjected to heavy loads. This ergonomic line includes front and back hand grip. BL series crates may be suspended on mobile racks or shelved, thanks to the edge included for this purpose. Space is provided for a label, facilitating identification.

N SERIES

There is a 180° difference between nesting and stacking. If positioned in one direction, N series crates can be readily nested, thus saving space. However, by rotating by 180°, the pieces can then be stacked so that the content remains inside them, thus making for optimal management of goods, handling times and general logistics. These pieces can be provided with closed or perforated sides.

S SERIES

This is a major classic product for bakery and food sector use. The S series is made up of stackable crates with external handles, a closed bottom and closed sides. These crates are ideal for dough and fresh pastries of all kinds, since they are readily cleanable and safely hygienic. The handles facilitate rapid manual handling operations. The lids, available for all dimensions, assure perfect seal and hygiene.

I SERIES

The crates of the I series are produced in low density polyethylene. They are ideal for the sector of production and distribution of fresh pastries of all kinds. They are also resistant against chemical agents. Suitable for food use, these crates are available with closed or perforated sides and lids for the various dimensions.

R SERIES

Practicality is sometimes a matter of how you look at things. R series crates can be transformed from stackable to nesting by quite simply rotating them 180°, thus saving space and practically doubling in height the number of crates storable in a given space. Practical and resistant since they are made out of high density polyethylene (HDPE), these pieces are suitable for use in the food sector and many other industrial sectors.

HAMBURGER BUNS

A series of polypropylene crates has been devised, dedicated for fast food chain use for transport of hamburger buns. Transfer from bakeries to retail outlets is simplified, since standard 600x400 mm pans can be contained and the baskets can be transported on standard trolleys. The bottom and perforated sides assure optimal air circulation for storing the buns. Optimal resistance is assured thanks to the premium materials used for construction, ideal for the food sector.

VEGISLAND

Modular exhibition spaces for the presentation of fruit and vegetables. The display islands are quick and easy to set up, quick to move thanks to the trolley system on wheels, and hygienic and safe for customers. With an additional advantage: the system is designed to allow for easy access and ensure effective cleaning. The modular structure makes them ideal for any size or space requirement. Display islands and containers are available in customised colours.

DISPLAY ISLAND

Available in **3 different colours**:
mustard, beige and brown

PP panels

PALLETS

The pallets present a considerable load capacity, uniformly distributed across the load-bearing surface. They are resistant and lightweight. The surface has been finished for greater friction and safer handling. These pallets are ideal for worldwide transport since no phytosanitary treatment is required and no dampness problems arise. They are readily stackable thanks to the well-designed base and feet.

STACKABLE PALLETS

Code	Outside dimension mm	Static load kg	Dynamic range kg	N. crossbars
PL	800x1200x135	1800	600	-

ECOPL80120	800x1200x150	1600	800	60

TANKS AND BOXES

The tanks and boxes can be used for any number of purposes. They are of considerable use for industrial handling operations. The tanks are very highly resistant containers for dough, with rounded, reinforced edges and smooth sides to facilitate cleaning. They can be provided with or without wheels. Special trolleys can be provided for them, in stainless steel, for tipping over. The boxes are user-friendly. They are made of a rigid material that gives them marked impact resistance and resistance also against intensive use. They are stackable and are available also with wheels, for handling particularly heavy loads.

TANKS

ECOLOGICAL CONTAINERS

Within each company, all those products and solutions for the management of waste, processing residues and garbage are fundamental. Bins, tubs and pails complying with European regulations enable safe storage of solid and liquid materials for various industrial sectors, maintaining the highest levels of hygiene. These ecological containers are made of high-quality plastics for non-deformability and for resistance to thermal stress and atmospheric agents. The pails in plastic include a graduated scale, reinforced hand grip and a handle in galvanized iron. The lip facilitates pouring.

TERMOBOX

The Termobox line of containers is ideal for horeca, restaurants and catering companies. These containers are extremely lightweight and excellently maintain the temperatures of dishes and other products contained. They are also resistant to wear and tear. Termobox containers were designed to ensure safety above all, during both goods handling and storage operations. They maintain temperatures of less than +4°C or higher than 65°C for many hours during storage and transport operations. The containers are readily cleanable. Potential cross-contamination is curbed. Thanks to these characteristics, this line of products has been extremely successful.

Lightweight, and manufactured in EPP (foam polypropylene). The performance ratings of this environmentally compatible material are impressively high.

Since these containers are chemically inert, they are impervious to oils, greases and most chemical substances.

Markedly impact resistant, with no damage ensuing, thanks to the optimal level of absorption of mechanical energy.

Thanks to this material's extraordinary structural strength, these containers can bear heavy loads with no deformation.

Washable in washing machines.

Suitable for food products.

100% recyclable.

TOP-LOADER TERMOBOX

Top-loader Termobox containers are the outcome of an exclusive design idea, capable of saving up to 30% available space. The grooves in the internal sides of Termobox containers facilitate loading and unloading the GN 1/1 and 1/2 trays. A pre-stamped space may be used to add ID labels. The handles are ergonomic, thus facilitating safe lifting. Stackability is assured, also with containers of third parties present within the marketplace.

Easy to load and unload
with conveniently grooved inner sides

Identification facilitated
thanks to inclusion of a space for labels

Ergonomic handles
for safe handling

Storage of hot foods

Storage of cold foods

NB: The best results are obtained by loading the trays at a temperature in the 82°C-88°C range. Temperatures higher than 120°C may damage the container.

TOP-LOADER TERMOBOX

FOR GN 1/2 HOLDING

Code	Outside dimension mm	Inside dimension mm	Unit weight kg	Liters

TB7537	690x490x370	625x425x305	1,70	80

FRONT-LOADER TERMOBOX

Front-loader Termobox containers are a solution designed for practicality and user-friendliness. A division is provided for eutectic plates or icing boxes. The division is fitted on the inner back side in order to curb dripping and condensation from above, and in order to enable uniform distribution of the temperature desired within the box as a whole. The top includes a perimeter hand grip for safe, convenient handling on all 4 sides. Opening and closing are facilitated by inclusion of the door with rounded edges. The door can be opened to 270° thanks to the hinges and snap latch in nylon. The door can remain open to the side of the front-loader, thus facilitating access to the products. The snap latches ensure that the containers remain safely closed during transport operations. Front-loader Termobox containers are also non-drip, given the upturned lower lip. They are readily stackable even with containers from third parties.

Easy to open and close
Thanks to the rounded edges of the door

Simply identifiable
Use the space provided for labels

Smart design
Inner division for eutectic plates or icing boxes, to distribute the temperature and prevent dripping

Easy to handle
Perimeter hand grips to facilitate safe handling

Opening at 270°
Access to the products facilitated by the door that can be fully opened. Reinforced closure.

Anti-drip
The upturned lip on the bottom of the front prevents liquids from escaping.

Storage of hot foods

Storage of cold foods

NB: The best results are obtained by loading the trays at a temperature in the 82°C-88°C range. Temperatures higher than 120°C may damage the container.

FRONT-LOADER TERMOBOX

WITHOUT RAIL

Code	Outside dimension mm	Inside dimension mm	Weight kg	Liters
TB7569	770x540x687	615x410x585	6,10	155

These multi-use containers without rail were designed for transporting crates, pans and trays (60 x 40 cm). These containers can also be modified for greater versatility with the inclusion of optional adjustable rails in stainless steel, KITADJR*, for transporting 60 x 40 cm crates, trays and baking pans in the same unit.

* See the accessories.

WITH 6 RAILS

Code	Outside dimension mm	Inside dimension mm	Weight kg	Liters
TB7569R6	770x540x687	615x410x585	6,34	126

The containers are available with 6 moulded built-in rails. The containers were designed to hold trays and 60x40 cm pans in position during transport, with no worries about spillage or loss.

WITH 9 RAILS

Code	Outside dimension mm	Inside dimension mm	Weight kg	Liters
TB7569R9	770x540x687	615x410x585	6,60	126

The containers are available with 9 moulded built-in rails. The containers were designed to hold trays and 60x40 cm pans in position during transport, with no worries about spillage or loss.

FRONT-LOADER TERMOBOX

WITH ADJUSTABLE RAILS

Code	Outside dimension mm	Inside dimension mm	Weight kg	Liters
TB7569ADJR	770x540x687	615x410x585	8,17	155

This exclusive multi-use container was designed with 2 sets of adjustable rails* in stainless steel enabling the operator to transport various containers including 60 x 40 cm crates, trays and baking pans in the same unit.

* Additional rails may be purchased separately. See the accessories.

FOR GN 1/1 TRAYS WITH 8 RAILS

TERMOBOX ACCESSORIES

ICING BOXES

Code	Dimension mm	Weight kg
CP3226	325x265x30	1,75
CP5332	530x325x30	3,90

The icing boxes were designed to prolong the time of low-temperature storage of food. Freeze the icing box in a horizontal position for one night and then place it vertically in the container.

EUTECTIC PLATES

Code	Dimension mm	Weight kg
HP5332	530x325x30	3,25

The eutectic plates were designed to prolong the time of high-temperature storage of food. Submerge the plate in hot water for 35 minutes and then place it on the bottom of the container.

LABELS FOR IDENTIFICATION

Code
IDL5

Coloured stickers provided to facilitate identification. Operators will find it easier to select container contents and their uses.

COMPARTMENT TERMOBOX

Designed for home delivery, these items can contain 2 full meals (including hot or cold dishes, bread or fruit, drinks and cutlery). Compartment Termobox is ideal for use by catering companies, hotels, schools, hospitals, universities and collective entities in general. The separate compartments mean both hot and cold food products can be stored in full safety. This product was manufactured using ecological polypropylene with optimal heat-insulating properties. Compartment Termobox is therefore the ideal high-performance ratings solution for any number of food transporting operations, also thanks to the shock-resistant and durable material.
